## tyne and wear metro electrified lines

THE OVERHEAD LINE EQUIPMENT on the Metro route between St. James and Hadrian Road Stations has been energised at 1500 volts $D C$. This energisation includes the sections of Metro line adjacent to B.R. lines in the Stoddart Street area and at Chillingham Road through Metro points 3016, 3014 and 3012 adjoining the BR Up Siding, the Heaton Depot entry/exit line, the Corporation Siding and its connections via Signals $100 / \mathrm{CT} .13$ and 92 . These lines must be regarded as ALIVE at all times.

The Working Instructions for A.C. Electrified Lines BR 29987 and Extracts BR. 29988 dated 3 May, 1975 applies and the isolation and earthing procedure detailed therein is in operation, subject to the modifications shown on page 426 of the Northern Area Sectional Appendix.

ND-3

## ITEMS PUBLISHED FOR THE FIRST TIME IN THIS NOTICE

Note:- Items in this first section which have not been published in the Weekly Operating Notice are additionally noted by a vertical line in the margin.

Page 22

## WOOLLEY COAL SIDINGS

Delete all instructions and substitute:-

1. All trains must be propelled into the siding from the Down Main line.
2. When a train is propelled into the sidings, it must be stopped with the locomotive in rear of the colliery outlet signal, where the Driver must await further instructions.

## alterations to supplementary Operating instructions

## mISCELLANEOUS NOTICES

Page 171

## STABLING OF CLASS 20 AND CLASS 40 LOCOMOTIVES

Note : (11) Amend to read:-
Until modifications are completed, those Class 20 locomotives which require to be scotched on stabling are identified by a Notice adjacent to the parking brake handwheel, and such locomotives must be subject to the conditions set out as Note 3 to the table on page 1.59 of the General Appendix.

## MISCELLANEOUS NOTICES

## SEACOW BALLAST HOPPER WAGONS

Providing that the existing load, length limits, etc. are not exceeded then in the case of trains containing one or more Seacow wagons numbered in the range DB 980000-980073 and DB 980157 - 980250 the maximum weight of train behind the leading Seacow wagon shall not exceed 576t, and over steeply graded routes shall be further restricted in accordance with the following table:--

## Gradient

Steeper than 1 in 40 rising

## Maximum Trailing Weight - Tons

384
1 in 40 to 1 in 46 rising
448
1 in 47 to 1 in 56 rising
512
Less than 1 in 56 rising
576

## WORKING MANUAL FOR RAIL STAFF BR30054 - WHITE PAGES - PART 6

C. Working of Freight Trains.

Additional Item

## Stabling of Wagons with Buffers Compressed

Whenever wagons are stabled in sidings or terminals for any significant period of time, all staff must ensure that none of the wagons are left with the buffers compressed as this will lead to deterioration of the buffer and a shortening of its effective life, particularly in the case of pnuematic/hydraulic buffers.

MISCELLANEOUS NOTICES - continued

## ADLAKE 1400 EECTRIC BATTERY - TAIL LAMP

400 prototype Adlake 1400 Electric Battery Tail Lamps ( 80 of which are allocated to the E.R.) will shortly be coming into service for extended trails.

1. Description

The lamp is powered by a non-rechargeable, long life battery and is activated automatically when placed on a lamp bracket. The lamp will then be illuminated, or remain off, depending on the amount of ambient light reaching the light sensitive cell, a flap is provided to over-ride the light sensitive cell and illuminate the lamp when required.

A red low-battery warning light will be illuminated when the battery is reaching the end of its life.
2. Bringing the lamp into service

Before being placed on a lamp bracket the test button must be depressed to check that the lamp is in working order.
3. Low Battery waming light

A lamp must not be brought into service if the low-battery warning light is illuminated but, if the warning light becomes illuminated during a journey, the lamp may remain in service until the end of the journey.
4. Use of overnat flay

The flap must be placed over the light sensitive cell during fog or falling snow in order to comply with the Rule Book, Section H, Clause 7.3.2. In normal circumstances the light sensitive cell must be allowed to work automatically.
5. Use of lamp

The lamp may be used on tank vehicles designed for the conveyance of highly flammable liquids (low flash point) or flammable gases.
6. Lamps not in use

When not in use, lamps must be stood in the upright pocition in order to keep the batery is; good condition.

## RULE BOOK B.R. 87109

Section A - clause 2.1
Delete existing clause and substitute:-
2.1 The British Railways Board may at any time :-
(i) Suspend an employee from duty whilst investigations are proceeding prior to the employee being given a hearing at which he can state his case.
(ii) After giving the employee the opportunity to state his case, dismiss without notice, suspend from duty as a disciplinary measure, reduce in grade, transfer to another post or station which may or may not involve a reduction in grade, or suspend or curtail travel facilities for any of the following offences :-
(a) being found under the influence of drink or drugs,
(b) disobedience of orders,
(c) misconduct or negligence,
(d) serious insubordination,
(e) violent behaviour,

RULE BOOK B.R. 87109 - continued

## Section A - clause 2.1 - substitute - continued

(f) absence from duty without leave,
(g) arrest or summons on charge of theft whether at the instance of the British Transport Police or Civil Police,
(h) conviction for criminal offence in a Court of Law which indicates unsuitability for further railway employment,
(i) cash irregularities,
(j) disregard of rules or instructions in particular those which involve safety of members of the public, other employees or themselves,
(k) repeated committal of minor offences,
(I) misuse of travel facilities,
(m) failure to produce satisfactory references,
(n) persistent failure to perform duties in a satisfactory manner.

### 2.2 Delete from second and third lines:-

"or suspension from duty prior to dismissal as the case may be".
Delete clause 2.3 and re-number 2.4 to 2.3 .

## Section H, Clause 4.4.2.

Add as final sentence :-
If two single cab locomotives are in multiple and the rearmost cab is fitted with an emergency brake valve, the Guard must ride in that cab.

## Section $N$

Pages $4.25 \& 4.26$

## CIVIL ENGINEER'S TRACK RECORDING COACH (DB.999550)

Amend second sentence of clause 8 to "It must not be entered nor"

## Section 6 <br> Page 6.16 <br> MINIATURE SNOW PLOUGHS

Amend second paragraph to:-
The centre blade must be removed from locomotives during the period 1 April to 30 November, uniess the Regional Chief Operating Manager considers otherwise owing to exceptional weather.

Regions may also remove the two outer blades during the same period if they wish to do so.

GENERAL APPENDIX - continued

## PART II

Section 15 - Provision of Electric Power Supply to Locomotives - Hauled Trains for heating, air conditioning, etc.

Page 15.17 clause 25.1
Delete from Table:--
1st Portion
Locomotive class 27/2, E.T.H. Index 28.

## 2nd Portion

Locomotive classes 55 and 84

Page 15.18 clause 25.3
Amend that part of the table referring to E.T.H. index numbers 6 and 7 as follows:-
PKF
Mark 3a SO, FO, SLE, SLEP (pantry tea boiler NOT in use)
Mark 3 a SLEP (pantry tea boiler in use)
)
) 6
7

Page 15.19 clause 25.4
Amend paragraph (d) and Add new paragraph (e) :-
(d) Mark 2d, 2e, 2f and 3a (including catering but excluding sleepers)
(e) Mark 3 sleepers

31/4, 45/1, 47/4
(except 47401 - 47420 inclusive). $47 / 7,50,86,87$.
$31 / 4,45 / 1 ., 47 / 4$,
47/7, 50, 86, 87.

Delete clauses 25.4.1 and 25.4.2

## Page 15.19

Delete clause 26.1.2 and substitute :-
26.1.2 If the train has not been pre-conditioned, or has stood for more than one hour, the total ETH index must be reduced to the locomotive figure. (see clause 25.2 for Class 50 locomotives September 15 to May 15). This may be done by:-
(a) Turning the air conditioning master control switch to AUXILIARIES ONLY in sufficient coaches (probably one or two) which effectively reduces the index of the coaches concerned to zero.
or (b) By informing the catering staff that sufficient kitchen equipment must be switched off to enable the index to be adequately reduced. In the case of Mark 3a RSB and RUB vehicles, the low load switch may be operated. This reduces the heating load to index 9, but this emergency index is not painted on the vehicle end.
or (c) In the case of Mark 3 sleeping cars by informing the Sleeping Car Attendants that sufficient pantry tea boilers must be switched off. This reduces the heating load of a SLEP vehicle (i.e. Index 7) to that of a SLE (i.e. Index 6).

The train power must then be switched on and after one hour, the switched out coaches may be switched on again. Alternatively, the catering equipment or sleeping car pantry tea boiler can be used again.

Delete clause 26.1.3 and substitute:-
26.1.3 The Guard if necessary must decide the method by which the index is reduced and advise the catering staff or Sleeping Car Attendants accordingly.

## GENERAL APPENDIX - continued

## Part II

Section 16. Regulations for Working the Automatic Air Brake on Locomotive Operated Trains
Page 16.21
Delete Clause 13.5 and substitute :-
13.5 Identification of Equipment

Vehicles fitted with through pipe only are indicated by white markings on the corner of the
vehicles as shown below.

Vehicles fitted with Automatic Air Brake equipment can be identified by abbreviations in capital letters painted near the middle of the sole bar on each side of the vehicle.
Type of braking system :-
WA - G Fixed Goods
$\mathrm{Ch}-\mathrm{P} \quad$ Fixed Passenger
O - GP Goods or Passenger with Changeover Lever
Note : The letters WA, Ch and O indicate the manufacturers of the equipment.

## WORKING MANUAL FOR RAIL STAFF (BR.30054)

## PINK PAGES

Section D. Loading and Unloading

1. Freight train traffic
(iv) Radioactive substances

Delete clause D1/15 - whole paragraph (no longer applicable)

## Section F. Working of Freightliner trains

## WHITE PAGES

~Add :-
'The present arrangements under which Freightliners Ltd., documents are conveyed in special document bags handed to the guard are to be discontinued. Outer wagons are in process of being equipped with lockable boxes for the conveyance of their documents. Where this arrangement is in force Form B.R. 29973 and other B.R. documents will be handed to the guard prior to the departure of the train. Guards, must hand over these documents to the guard who relieves them. When there is no immediate handover to the guard working the train forward, these documents must either be handed to yard staff on duty, or where this is not possible, placed in the label clip of the wagon which will be leading on departure. Terminal Overseers will advise guards prior to departure whether document bags or boxes are in use on trains'.
(MO.34/63)

## Page 276 - continued

Add:-
BROKEN WINDOWS (SINGLE OR DOUBLE GLAZED) ON PASSENGER CARRYING COACHING STOCK
The instructions contained in the General Appendix under the above heading must be interpreted as follows on the Eastern Region:-

2 (a) Outer pane of double glazing scored three inches or more or broken

1- The appropriate full seating bay(s) of the vehicle must be taken ) out of passenger use. The Guard must advise the Driver of the ) circumstances and instruct him to proceed at a speed not ) exceeding $100 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. to the next place where C \& W staff are available.
)
) The C \& W staff must remove all the glass from the defective ) outer pane and apply adhesive tape over the intact inner pane. The train may then continue in service with the appropriate full ) seating bay(s) remaining out of passenger use. The speed of the ) train must not exceed $100 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. and the Guard must advise the
) Driver accordingly.
(b) inner pane or both panes, or
(c) single glazed pane scored three inches or more or broken
) - Train must be stopped as soon as possible and all the defective
) glass removed. Remove passengers from coach and label "out of ) use". If access through coach is required the Guard or other ) competent member of the staff must be in attendance.
The speed of the train must not exceed $100 \mathrm{~m} . \mathrm{p} . \mathrm{h}_{\text {. }}$ and the Guard ) must advise the Driver accordingley.

- Train must be stopped as soon as possible and all defective ) glass removed. The windows frame must be put in dropped

If either the inner or outer pane of an HST trailer sidelight or the door drop sidelight is found to be scored by three inches or more or broken on examination at a Maintenance Depot that vehicle must not be released into service until the defective sidelight unit is replaced.

Note :- A number of perspex replacement windows for H.S.T. Trailer Cars are allocated to principal intermediate and terminal stations on the East Coast Main Line, When $C$ and $W$ staff have fitted one of these perspex windows to replace a broken double glazed window, the above restrictions no longer apply i.e. the H.S.T. Set can revert to running at line speed with full use of the coach seating bays restored.

The perspex windows are each supplied within individual hardboard sheets for transportation purposes, together with a special spanner. Each hardboard sheet bears the name of the allocated station and when a perspex window has been fitted, the hardboard sheet and special spanner must be placed in one of the power car brake compartments to enable the Depot, replacing the window, to return it to the owing station suitably protected, together with the spanner.

## EASTERN REGION SECTIONAL APPENDIX (NORTHERN AREA) - continued

INSTRUCTIONS RELATING TO THE GENERAL APPENDIX - continued
Page 291
Add:-
ROAD/RAIL RECOVERY VEHICLE REGISTRATION NO. KYH 862 X OPERATING INSTRLCTIONS FOR USE ON RAIL

## 1. GENERAL

1.1 The vehicle is equipped with breakdown equipment and can travel either by road or rail.
1.2 The vehicle can be transferred to and from rail at any place where the ground level is at or above sleeper level.
1.3 The vehicle must not be used on lines electrified on the conductor rail system.

## 2. RULES AND REGULATIONS

2.1 The vehicle may only be placed, stand or travel on a running line which is under Engineers' Absolute Possession and all relevant Rules and Regulations must be applied.
2.2 The vehicle must only be used by the staff authorised by the CM\&E Engineer and then only in accordance with these instructions.
2.3 The road lights must be switched off when the vehicle is on rail. Separate electric marker and tail lights are provided for use on rail and two white lights at the front and a red tail light at the rear must be illuminated at all times.
2.4 Two red handsignal flags, not less than 10 detonators, a handsignal lamp, two wheelchocks and 2 sets of track circuit operating clips must be carried on the vehicle. In addition, 2 red banner flags and 2 lamps capable of showing a red light along the line in both directions must be carried, for use should it be necessary for the CM\&E Engineer's man-in-charge of the vehicle to take an Absolute Possession (Rule Book, Section TIII).
2.5.1 The CM\&E Engineer's man-in-charge of the vehicle must have been passed as competent to carry out any protection arrangements necessary on site or during the transfer of the vehicle to and from rail, including the arrangements required by the Rule Book, Sections TI, TII, TIII and TIV.
2.5.2 The vehicle must be driven by a member of the CM\&EE's staff. A person passed as competent to carry out the necessary arrangements for protection should an incident occur resulting in the fouling of a running line open to traffic, must accompany the vehicle.

## 3. WORKING INSTRUCTIONS

3.1 Before the vehicle is placed on or allowed to travel over any running line, the Engineer must first have taken Absolute Possession of the line concerned, in accordance with the Rule Book, Section TIII. In addition, the permission of the Person-in-charge of the Possession must be obtained before the vehicle is placed on the line.
3.2 During the process of transferring to and from rail, or turning the vehicle to face in the opposite direction, if the adjacent track is a running line open to traffic, the provisions of the Rule Book, Section TII or TIV must be applied.

## EASTERN REGION SECTIONAL APPENDIX (NORTHERN AREA) - continued

instructions relating to the general appendix - continued
Page 291 - Add - continued
3. WORKING INSTRUCTIONS - continued
3.3 Before transferring from road to rail, the driver must :-
(a) Check that the vehicle is equipped as shown in Instruction 2.4.
(b) Check that the tail light and the 2 front marker lights are illuminated.
(c) Test the hand brake and also the main power brake.
(d) Test the warning horn.
(e) Test the buzzer from the staff riding compartment.
(f) Check that the steering wheel is locked in the straight-ahead position.
3.4 The maximum permissible design speed of the vehicle on rail in the forward direction is $35 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. , and $15 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. over points and crossings. Speeds must, however, be regulated in accordance with the Rule Book, Section TIII, Clause 15.2.
3.5 Movements in reverse must only be made for short distances and at a speed not exceeding $10 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. When travelling in reverse, a competent man must ride in the staff riding compartment, keep a sharp lookout, and signal to the driver by buzzer code as follows:-

1-Stop
3 - Ready to move in reverse direction
When necessary he must sound the horn to warn persons on or about the track.
3.6 When left unattended the vehicle must be left in gear and secured by the handbrake; wheelchocks must also be used under all conditions.
3.7 Should the vehicle fail and be unable to run under its own power, it may be moved by a locomotive using the emergency tow bar carried on the vehicle. The speed must not exceed 10 m .p.h. on plain line and 5 m .p.h. over points and crossings. The driver must ride on the vehicle.
3.8 When the vehicle is transferred clear of the line under possession, ine Person-inCharge of the Possession must be advised accordingly.

## FAILURES OF TAIL OR SIDE LAMPS

Delete:- heading and item and substitute:-

## FAILURE OF OIL TAIL OR SIDE LAMPS

Should a train be stopped owing to a tail or side lamp being out the lamp must be re-lit and used for the completion of the journey unless there is an apparent defect which requires the lamp to be substituted.
On completion of joumey or at the point where he is relieved, the Guard must report the circumstances together with details of any apparent cause for the failure and, at the terminating point of the train the lamp must be withdrawn and not restored to service until it has been established that there is no defect.

The Area Manager at the terminating point must report details of the failure promptly to the Area Manager at the starting point of the train so that suitable action to prevent recurrences can be taken where necessary.

Page 4 (Page 158 Supp. Optg. Insts.)
Delete existing instructions and substitute :-

## LOADING OF M.G.R. TRAINS

The loading of M.G.R. trains must be in accordance with the Weekly M.G.R. Circular. If the programmed locomotive is not provided, the following loads are authorised :-
a) Class 47 hauled to all CEGB Power Stations - 30 wagons except trains to Fiddlers Ferry and from Harworth/Maltby Colliery to Worksop.
b) Class 47 hauled Doncaster to Scunthorpe (CHP) - 30 wagons provided an assisting locomotive of no less than Class 31 is provided in front from Gunhouse to Scunthorpe; if an assisting locomotive is not provided -28 wagons.

Clause (c)
Class 47 hauled Doncaster to Immingham via Gainsborough - 32 wagons.
Class 47 hauled Doncaster to Immingham via Scunthorpe - 32 wagons, provided an assisting locomotive of no less than Class 31 is provided in front from Gunhouse to Barnetby, if an assisting locomotive is not provided - 28 wagons.
d) Class 47 hauled Worksop to Immingham via South Yorkshire Joint - 32 wagons, provided the train is assisted by a Class 47 between Worksop and Dinnington Colliery Junction and no less than a Class 31 in front from Gunhouse to Barnetby.
e) Class 47 hauled Worksop to Immingham via Woodhouse, Attercliffe Junction and Doncaster, as authorised in clause (c).

## GRIMETHORPE COLLIERY

## Delere instructions and substitute:-

1. Upon arrival of a train at signal 1, the Guard must alight and proceed to the emergency switch at the bunker.
2. The loading signals will then be switched on to the "Move at low speed in opposite direction to that required for loading" aspect. When signal 1 is cleared the train must proceed at a maximum speed of $3 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. for tare weighing.
3. The train will be stopped by the loading signals with the four rear wagons beneath the bunker, for loading whilst stationary.
4. The train will then be authorised to propel and must not exceed a speed of $1 / 2 m . p . h$, to complete loading and it must be stopped when clear of the weighbridge, after which the loading signals will be switched out and the train documents handed to the Guard.
5. During tare weighing and loading, the Guard must remain at the emergency switch to restore the special loading signals to the "Stop Immediately" aspect in case of emergency and he must not allow loading to re-commence until ine is satisfied it is safe to do so.
6. When the train is ready to depart, it must be propelled clear of signal 3 to enable the locomotive to run round.

INSTRUCT:ONS TO STAFF DEALING WITH M.G.R. TRAINS AND BUNKER/RAPID LOADING COLLIERIES B.8. $30059 / 5$ - contimued

Page 18A
Add:-

## KELLINGLEY COLLIERY

1. All trains entering the bunker arrival line must be hauled,
2. When signal 1 is cleared the train must proceed at $1 / 2$ m.p.h. under the control of the loading signals for tare weighing and loading.
3. During this operation, the Guard must position himself at the emergency stop button and restore the loading signals to the "Stop immediateiy" aspect in the event of emergency and must not allow loading to recommence until it is safe to do so.
4. On completion of loading, the loading signals will be switched out and the Guard handed the train documents.

## Cripples

5. The points leading to the cripple siding are set and padlocked for the bunker line and the key for the padlock must be obtained from the Signalman to whom it must be returned after use.

Speed Limits
6. Over weighbridges when not loading . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 3 m.p.h.

Pages 20/21

## SHARLSTON COLLIERY RAPID LOADING FACILITIES

Delete and Substitute:-

## SHARLSTON COLLIERY

1. The loading signals will be switched to the "Move at low speed in opposite direction to that required for loading" aspect and when the shunt signal is cleared, the train must proceed through the bunker at a speed not exceeding $5 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. and stop immediately before passing over the hold-up hand points for the Guard to alight and examine the points. The train must then draw forward and it will be stopped by the loading signals with the rearmost wagon positioned for loading.
2. The train must be propelled during loading at a speed not exceeding $1 / 2 \mathrm{~m} . \mathrm{p} . \mathrm{h}$.
3. The Guard must position himself at the Bunker throughout loading and be prepared to stop the train by pressing the lineside plunger to restore the loading signais to the "Stop Immediately" aspece in the event of emergency and he must not allow loading to recommence until he is satisfied it is safe to do so.
4. When the wagon next to the locomotive has entered the bunker for loading, the train will be stoppsd to enable the wagon to be loaded whilst stationary.
5. The Guard must ensure he is in possession of the train documents before departure.
6. Movements over the bunker arrival/departure line and run-round line, except as shown above, must not exceed IOm,ph.

## Cupple Siding

7. The facing hand points to the cripple siding must be secured in the required position by ciip before any movement is made to the siding. The key to the padlock is kept by the Bunker Operator.
8. When work is comeleted at the siding, the hand points must be left clipped and padlocked in the normai position and the key retumed to the Bunker Operator.

## THORPE MARSH POWER STATION

## Page 44

Working during fog or falling snow
10.

Add as second paragraph :-
Running round arrangements are subject to traffic requirements prevailing at the time but will normally be undertaken at Skellow Jn . In such circumstances the train must stop short of Signal D735 (Down Skellow line) by 150 yards, where the locomotive must be detached for running round via shunt signal D1164 (Adwick Jn.) and the Up Skellow line.

## WORKING INSTRUCTIONS - CLASS 253/254 TRAINS BR.33069/2 DATED OCTOBER 1980

Page 2, Section 2, Modifications to the Rule Book
Insert new item 2.1.

### 2.1. Section $H$, clause 3.7.2.

Add:- (c) If the loud note control becomes defective, the train may continue in service but the maximum speed must be reduced to $100 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. The defect must be remedied before a subsequent turn is worked.

Existing items 2.1. to 2.5. to be renumbered 2.2. to 2.6.

## Page 8

Amend numbering of existing items 7.4.5-7.4.10 to read 7.4.6-7.4.11
Add new item 7.4.5 :-
If in the course of a journey it is necessary to isolate the brake pipe pressure control unit on the rear power car the Driver must be informed and he must then limit the speed of the train to $10 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. below the maximum speed of the line, or $10 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. below such other lower speed restriction shown in Table ' $A$ ' of the Sectional Appendix. On completion of that journey the train must be taken out of service since, on reversal, it will not be possible to charge the brake pipe from the now-leading power car with the brake pressure control unit isolated.

## IDENTIFICATION OF AIR BRAKE EOUIPMENT ON CONTINENTAL AND BRITISH TRAIN FERRY VEHICLES

 Delete:- heading and item.
## INDICATORS WORKING IN CONNECTION WITH, OR IN PLACE OF DISTANT SIGNALS

At signal boxes where an indicator working in connection with, or in place of, the distant signal for the signal box or level crossing in advance is provided, the Signalman must not clear his distant signal whilst the indicator worked from the box or level crossing in advance for the line concerned is in the "On" position.

Where the box or level crossing from which the indicator is worked will be open for a period when the rear box is closed, the distant signal worked from the rear box for the line to which the indicator applies must be left at Caution when the rear box closes. Where, however, the distant signal can be also worked from the signal box or level crossing in advance the distant signal lever in the rear box must be left so that the advance box Signalman or Level Crossing Keeper will be able to work the signal as necessary.
Where indicators are provided in connection with directing distant signals worked from the box in advance, the Signalman must, before clearing his distant signal, satisfy himself that the Signalman at the box in advance has cleared his distant signal for the line upon which the train is required to proceed beyond the junction.
(MO/44)

## CHANGE OVER TO SINGLE PIPE AUTOMATIC AIR BRAKE SYSTEM - CERTAIN CLASSES OF FREIGHT TRAINS

Only Freightliner and MGR trains now operate on the two pipe system, Under Clause 2.5 (e) of the Regulations for working the Automatic Air Brake etc., all other block trains, all Speedlink trains and all trains with an air-braked fitted head are permitted to operate on the single-pipe system.
